JUNE 2019 THE EXTREME ECOGP MONTH

**The electric car race series is conquering
new regions of Europe!**

In June there will be 4 premieres celebrated in
Hungaroring, Schauinsland, Hockenheimring and in Austria
at Zell am See climbing up the Grossglockner!

The standard electric car race is growing fast. In its 7th season, in June 2019, competitions three to six will all take part.

The rules are the same as always:

"DRIVE AS MANY LAPS AS POSSIBLE WITH YOUR ELECTRIC CAR IN THE GIVEN TIME FRAME. But be careful, you will only get 22kW sockets for charging, like every other eco Grand Prix competition!"

FIRST EVENT in June

The 3rd event of the season 2019 will take place on 1.6.2018 in Hungary

Eco Grand Prix is celebrating its premiere in Hungary, in the frame of Family Days event, at the famous circuit of Hungaroring next to Budapest. In the beginning of May, we have 3 teams from Hungary registered, so we are taking this opportunity to invite everyone in Hungary and the neighborhood countries to join the first eco GP in Hungary.

You will be challenged to drive 2 x 4,5 hours at the Hungaroring, with your 100% electric car trying to drive as many laps as possible. This event for companies and private teams is supporting the idea of promoting electric cars. Beside the eco Grand Prix, Family Days will have entertainment and we will also have a competition for children, the ecoGP 4 kids, where children can compete with electric remote-controlled cars.

SECOND EVENT in June

Germany, 8.6.2019

Eco Grand Prix will celebrate the rebirth of the traditional Schauinsland race, but this time full electric, following the eco Grand Prix specific rules you can [download from the website](#). Driver and Co-driver should drive as many laps from the Messe Freiburg FWTM – eco Grand Prix main Sponsor of this event – through the city, uphill, along the famous Schauinsland track and back. This challenge includes the task to do intelligent recuperating downhill, in order to reduce the charging time. NRG Kick is supporting us and showing that best AC charging at 22kW can be done via their NRG Kick mobile charger which has the feature to check via the app the status of your charge.

THIRD EVENT in June

Germany 15/16.6.2019

Here, eco Grand Prix joins the [e4Festival](#), a big event where you can test drive electric cars from NEXT MOVE in parallel to the event, which is set up to a 12 hours challenge, driving by night following the eco Grand Prix rules.

Both eco Grand Prix in Germany in June will not count in the international point system, but in a separate eco Grand Prix Germany Cup, which will be closed with the third challenge on 29.11.2019, the 24h of Oschersleben.

Last but not least, the month will be closed with an event in

Austria on 21/22.6.2019

IONICA invited eco Grand Prix to host the 24h challenge, driving around the beautiful lake at Zell am See. The teams will have to drive not only as many laps as possible in 24h, but also the special challenge is that after the competition, the laps will count if they manage to reach the Grossglockner mountain.

This competition is free for anyone who has an electric car and three team members

looking to have fun. It is the perfect team building for companies with sustainable focus and a lot of thrill and entertainment for everyone.

Speeding will not lead to the best ranking ... a lot of teams had to learn this last year, when they started the first time in Germany. Every car type is starting in its own category, meaning every category will have its winners: Renault ZOE, BMW i3, Nissan Leaf, Smart, Tesla Model 3, Tesla Model X, ... everyone will get the chance to win.

Follow us live over www.youtube.com/ecogp the day of the competition, or come to the race track to get the feeling of the sexy electric car sound.

Be part of it and like facebook.com/ecograndprix and subscribe to the newsletter ecograndprix.com/newsletter in order not to miss out on anything.

All statistics about the eco Grand Prix range of the cars and other details will be sent via Newsletters and displayed at the website www.ecograndprix.com.

We support the ["Fridays for Future"](#) movement and would like to take the opportunity to invite all children and schools to join the biggest demonstration in Europe, on Friday 29.11.2019, in Oschersleben, at the Motorsport Arena. We are able to welcome 50.000 children and will have there special guests and an amazing concert.

Please register early your school class if you are planning to come so that we can take care of the logistics of how to transport you emission free to the location.
